

# AI-RECRUITMENT MODEL

# INTRODUCTION

01

In the staffing and recruitment industry, recruitment teams need to physically visit a particular campus or conduct a placement drive and deal with thousands of candidates personally.

03

Employers work hard every day to source top talent and it's a challenge for them to communicate well with all their candidates.

05

AI has the potential to relieve them of this laborious task and make them focus on even better things. An AI recruiter will help to reduce the manpower and the tedious task to short-list the candidates

02

Moreover, due to the recent outbreak of the Novel Corona Virus, the main priority has been shifted to the safety of the company staff. Interacting with a number of candidates from different places is difficult.

04

We must cut it down as much as possible. Perhaps, AI can save the day! In today's case scenario we can see AI can be effectively implemented in many different ways.

# About Model

- The artificial intelligent recruitment system consists of a Candidate Panel and Admin Panel.
- As the name suggests the candidate panel is for the applicants applying for a desired position, whereas the admin panel is for HR personnel and recruiters.
- This solution helps, recruiting teams to screen and select candidates, saving a huge amount of time

# APPLICATIONS

Comapny  
Recruitments

Student Exchange  
Programs

Freelancers

College  
Committee

# CONCLUSION

*The artificial intelligent recruitment system is reliable and is uncomplicated.*

*This system can be used by any organisation and institution and can be re-designed according to need by making some minor changes.*

*The model will help to predict the best suitable applicant according to the requirement and need of the organisation or institution*
